

Wake bouts and RBD symptoms

preDLB vs HC | Diagnosis-specific adjusted GEE slopes

Pooled discovery: $\rho=0.271$, FDR $p=0.0456$. Adjusted GEE FDR $p=0.00704$; interaction FDR $p=0.00227$. Covariates: gender, education; 116 people. Continuous covariates are held at their means. Gender is held at the reference level. Thin lines connect repeated visits from the same person.
